

Tyler's current problems are:

1. Moderate concussion
2. Possible cervical spine injury (He failed the FSA due to mild spine pain.)
3. Left orbital fracture
4. Subconjunctival Hematoma

His anticipated problems include:

1. Severe concussion

Assist Tyler in slowly skiing back to the yurt. Once there, use the satellite phone to request transportation to the nearest hospital for physician assessment. Use a cold pack—snow in a plastic bag—to keep swelling down around his left eye as you wait. Continue to monitor his concussive S/Sx and update the evacuation team if they worsen.
